

ERIC REBER

CHIEF TECHNOLOGY OFFICER

Enterprise AI & Digital Transformation | Global Technology & Architecture

Switzerland | +41 79 823 63 17 | eric.reber@rscfirm.com | linkedin.com/in/rebereric

EXECUTIVE PROFILE

Technology executive with nearly 20 years of experience building, architecting and scaling business-critical enterprise platforms from hands-on engineering through global technology leadership and CTO responsibility. End-to-end Build-to-Run accountability across engineering, architecture, infrastructure, data, integrations, cybersecurity and resilience. Combines deep technical credibility with executive technology leadership, international enterprise delivery and practical AI transformation.

EXECUTIVE IMPACT

- Originated and led the technical architecture of a global enterprise solution for a Fortune 500 medical technology company, from initial pilot to international rollout across Europe, North America, Latin America and APAC; the platform now serves several thousand end users across four continents.
- Leading the evolution of a production document-processing platform handling 15,000-20,000 documents annually across 50+ formats, moving from traditional OCR to Document AI and Vision AI with AI-driven extraction, exception management and human review where required.
- Architected the second generation of a core enterprise platform from the ground up in 2015; significant architectural foundations remain in production and under active development more than a decade later.
- Built technology leadership from early-stage hands-on ownership toward distributed engineering, infrastructure and specialist accountability, while remaining the ultimate escalation point for architecture, production risk and complex technical incidents.

CORE LEADERSHIP AREAS

Technology Strategy	Enterprise Architecture	Engineering Leadership	AI & Digital Transformation
Global Platform Delivery	Technology Governance	Operational Resilience	Enterprise Integration & Data

PROFESSIONAL EXPERIENCE

Chief Technology Officer | Digital SupplAI SA

Jun 2025 - Present
Switzerland

First CTO of Digital SupplAI, reporting directly to the CEO, with end-to-end responsibility for technology strategy, architecture, engineering and operations following the company's creation through a corporate spin-off.

- Own the technology landscape from Build to Run across enterprise software platforms, infrastructure, data and integrations, cybersecurity, resilience and technology governance.
- Formalized the technology operating framework across software development, product security, disaster recovery, monitoring, incident response, support and responsible AI usage.
- Lead AI-assisted engineering adoption and governance, including approved enterprise tooling, data-handling principles and human accountability.
- Contribute directly to product strategy, technology investments, organizational development and long-term technology direction with executive leadership.

Engineering Lead & Solutions Architect | MCR Solutions SA

Jan 2018 - Jun 2025
Switzerland

Expanded from architecture leadership into broader engineering and technology responsibility for business-critical enterprise platforms and international customer delivery.

- Led engineering across architecture, development and technical delivery, contributing to recruitment, technical assessments, performance reviews, mentoring and progressive distribution of technical ownership.
- Led solution architecture and delivery across Europe, North America and APAC for enterprise inventory and supply-chain systems, ERP integrations, EDI, data platforms and infrastructure.
- Made architectural decisions around scalability, performance, regional deployment, integrations and platform reuse, balancing global standardization with customer and regional requirements.
- Maintained senior escalation responsibility for complex production, integration, infrastructure, performance, recovery and continuity situations.

Lead Solution Architect | MCR Solutions SA

Jan 2015 - Dec 2017

Held primary responsibility for solution and platform architecture, with authority over major technology decisions. Architected the second generation of the company's core enterprise platform from the ground up and increasingly shifted from direct implementation toward technical direction, design review, cross-layer problem solving and knowledge transfer.

Technical Lead / Solution Architect | MCR Solutions SA

Jan 2009 - Dec 2014

Progressed into technical leadership, leading software projects, supervising developers and taking ownership of solution design and architecture for increasingly complex international enterprise solutions across applications, databases, integrations and mobile platforms.

Systems Analyst / Developer | MCR Solutions SA

Oct 2006 - Dec 2008

Joined shortly after the company's creation as its first employee. Worked across software development, systems analysis and business management solutions, including major accounting functionality and the first version of a Swissdec-certified payroll module.

SELECTED TECHNOLOGY LEADERSHIP CASES

- Co-led technical recovery of business-critical services following the OVH Strasbourg datacenter fire, restoring an alternate instance the same day and coordinating transaction validation before customer re-entry.
- Redesigning a large-scale allocation-loading approach after identifying combinatorial expansion: approximately 20,000 source lines would generate roughly 40-42 million rows under the original model. Shifted mapping to count creation to keep ingestion manageable.
- Led a performance-recovery effort after master data growth increased selection volumes from roughly 7,000 to 50,000 records; a bounded kit operation improved from more than 10 minutes to under 30 seconds.

ADDITIONAL LEADERSHIP & GOVERNANCE

President, Financial Commission | Commune de Montet

Jan 2023 - Jun 2025

Chaired independent review of annual budgets, financial statements and major investment proposals; coordinated financial oversight and recommendations and presented formal conclusions to the Municipal Assembly.

Lecturer - Management Systems & Logistics / ERP | HEIG-VD

Jan 2019 - Jul 2021

Taught enterprise management systems, ERP, Business Intelligence and logistics, connecting academic concepts with real-world enterprise software and business processes.

EDUCATION

Bachelor of Applied Science (B.A.Sc.), Computer Science - HEIG-VD

2006 - 2009

ES, IT, Economics & Management - Ecole Superieure Vaudoise d'Informatique de Gestion

2004 - 2006

LANGUAGES

French - Native / Bilingual
